

# *VL-10HP High-Speed, Post-Stamp Tax Stamping Machine*

United Silicone, manufacturers of Meyercord brand tax stamping equipment, first revolutionized post-stamping with its original VL-10 Tax Stamping Machine. Now the **VL-10HP Tax Stamping Machine** is supercharged up from 70 cartons per minute to a *consistent* 90+ cartons per minute. Perfect for both pre- and post-stamp operations, the VL-10HP needs no purging or head-height adjustments. Differing carton sizes are now supported by sturdier springs that maintain a longer life than standard VL-10 springs. These new springs withstand the additional acceleration that comes along with high-speed performance. An improved dual-head glue and closer system compensate for multiple carton feed direction. The VL-10HP's servo-driven carton indexing system speeds set-up time and drastically limits the need for adjustments. Optional remote diagnostics allow United Silicone engineers to discover and resolve stamping issues promptly, saving distributors valuable time and money.

Other options are available including tandem and triple-heads, a text printer for carton flaps and a vision camera.

The **VL-10HP Tax Stamping Machine** is perfect for customers looking for the ultimate in post-stamping technology.

*Post-stamping is now fast stamping.*
