

A CUTTER FOR EVERY DIRECTION.

Building on top of the success of the HCC-612 Half-Sized Case Cutter, United Silicone is now offering a space-saving, straight-in-and-out version that offers more integration options for current conveyor layouts. Cases enter the In-Line ICC-612 'Half-Sized' Case Cutter with the wide-edge leading and are cut once. These cases then rotate 90 degrees and are cut again on the narrow-edge side before leaving to continue to the stamping area. Safer than an open table saw, the ICC-612 is caged with a customizable covering over the in-feed and out-feed conveyors. The ICC-612 cuts both 6M and 12M cigarette cases concurrently without any operator adjustment at an average speed of 5-7 cases per minute (dependent on operator feed-speed). Suction cups pull away corrugate from inner cartons while high-quality, long-lasting rotary blades cut cases, minimizing expensive product damage normally found from general automatic box cutters. An optional in-feed conveyor system evenly distributes cases entering the cutter, minimizing operator assistance and creating a fully automatic mode. Both the ICC-612 and HCC-612 6M and 12M Case Cutters are ideal for locations that are increasing variety and 6M case inventory, but may not have the space for a full-sized CC-612 Case Cutter. Call us at (800) 639-3799 to hear more about our line of Case Cutters as well as our entire family of United Silicone tax stamping and ancillary equipment.
